

WATER-SOURCED HEAT PUMPS

61WG optimized for heating
Compact design
Plug and play approach
High efficiency

61WG

AQUASNAP
Heating

Nominal heating capacity 29-230 kW

The 61WG units are new Carrier heat pumps designed for commercial (offices, small hotels, leisure facilities), residential and industrial applications. All units offer a unique combination of high performance and functionality in an exceptionally compact chassis. 61WG units are designed for high-temperature heating applications with hot water production possible up to 65 °C.

A large number of options is available for the whole range:

- hydraulic modules with or without variable water flow rate,
- reinforced sound insulation,
- stacking and connection of two units

61WG 110-190 availability: Q2.2018

CARRIER participates in the ECP programme for LCP/HP
